

Session in spin V3 – SUEP – Earth's gravity effect subtracted

Increase of frequency from 0.9 to $3.1 \times 10^{-3}\text{Hz}$
 $\Rightarrow$ Theoretical gain of 1.8 on the noise
 But in orbit gain of 4 (not explained)
 $\Rightarrow$ Needs 16 less time to reach the same perfo

$\sim 2 \times 10^{-10} \text{ms}^{-2} \text{Hz}^{-1/2}$
 With 1000 orbits, statistical
 error rejected to $80 \times 10^{-15} \text{m/s}^2$

Spin V2

Spin V3

$\sim 5 \times 10^{-11} \text{ms}^{-2} \text{Hz}^{-1/2}$
 With 1000 orbits, statistical
 error rejected to $20 \times 10^{-15} \text{m/s}^2$
